MOBILE X-RAY COMPANY CONTINUES TO GROW

Nashville based mobile x-ray provider, X-Ray Services, Inc. (XRSI) announces the addition of its third fully digital mobile x-ray unit. XRSI provides mobile diagnostic x-ray service to nursing homes, assisted living facilities, home health care and correctional facilities throughout middle Tennessee.

XRSI began serving facilities in June of 1999. In May of 2000 it expanded by acquiring the oldest mobile x-ray company in middle Tennessee, On-Site Mobile X-Ray. "We immediately began converting their entire operation to digital technology," says Joel Herring, President of XRSI. Our entire company utilizes technology provided by INPHACT®, also based in Nashville. The digital technology allows facilities and physicians to view their x-ray images instantly by way of RadWeb®, an Internet based viewing option provided by INPHACT®. This gives high quality mobile x-ray images, as well as the information availability 24/7, from anywhere in the world. Physicians can view images and reports on line via our secure server which enables immediate and continual access to patient information 24/7/365.

With this technology, we can provide service anywhere in Tennessee or other states with the results available to the patient's personal physician almost immediately. "We are excited about expanding this high quality x-ray service to the area" Herring says.
