MOBILE X-RAY COMPANY FORMED

X-Ray Services, Inc. (XRSI) a Nashville based company has begun serving Middle Tennessee Health Care facilities with its latest state of the art mobile digital x-ray equipment.

Founder and president of XRS Joel D. Herring, states "our company's primary focus is on improving the quality of mobile x-ray services in its area of coverage. Mobile x-ray companies have been around beginning in the early 1990's but have always utilized old portable technology which results in poor quality imaging and leads to questionable diagnosis. Because of this outdated technique of producing an image, primary care physicians were reluctant to utilize this convenient diagnostic tool. Our founding mission statement sums it up "Sharing today's DIGITAL imaging technology with your medical community" is clear. Our company brings the latest state of the art DIGITAL imaging to the patient. Better images lead to more diagnostic information and ultimately better health care. Aiding health care providers is our goal, and helping others provide better patient care is what makes me tick" states Herring.

This new technology, which is being used in many larger area medical centers, is now available to all patients, either in an assisted living, nursing home or in their home. XRSI is the only mobile x-ray company in Tennessee to operate 100% digital. High quality mobile imaging, 24/7/365 is what our health care service is all about.
