MOBILE IMAGING COMPANY OFFERS NEW IMAGING MODALITY

X-Ray Services, Inc. (XRSI), a leader in the mobile x-ray and imaging arena throughout Tennessee, has announced the addition of new diagnostic capability by way of adding DIGITAL Mobile Ultrasound to its company's diagnostic capabilities.

This newly acquired equipment allows our technologist to perform non invasive studies of the abdomen, veins and arteries as well as gynecological studies whenever ordered by the physician. As is the history of XRSI, the equipment is the "latest and greatest" available today. "Coupled with a highly skilled and fully credentialed ultrasound technologist, we are able to do ultrasound examinations that can only be done in most of the larger medical facilities" states Joel Herring, President of XRSI.

"This new technology is currently being used overseas by the military to provide high quality imaging on the battlefield" stated Herring. With the addition of this equipment manufactured by SonoSite and Philips Medical Systems, we continue to lead the way by offering the latest state of the art mobile diagnostic equipment to patients in need of our service.

We will continue to be on the lookout for the newest technology available to assist XRSI in providing the best diagnostic tools to health care facilities. Our entire team is committed to our long standing mission statement "Sharing today's DIGITAL imaging technology with your medical community" stands on its own. "All of us at XRSI are committed to excellence which is reflected by way of our long standing customer relationships we enjoy", says Herring.
